

FIBERSOURCE®

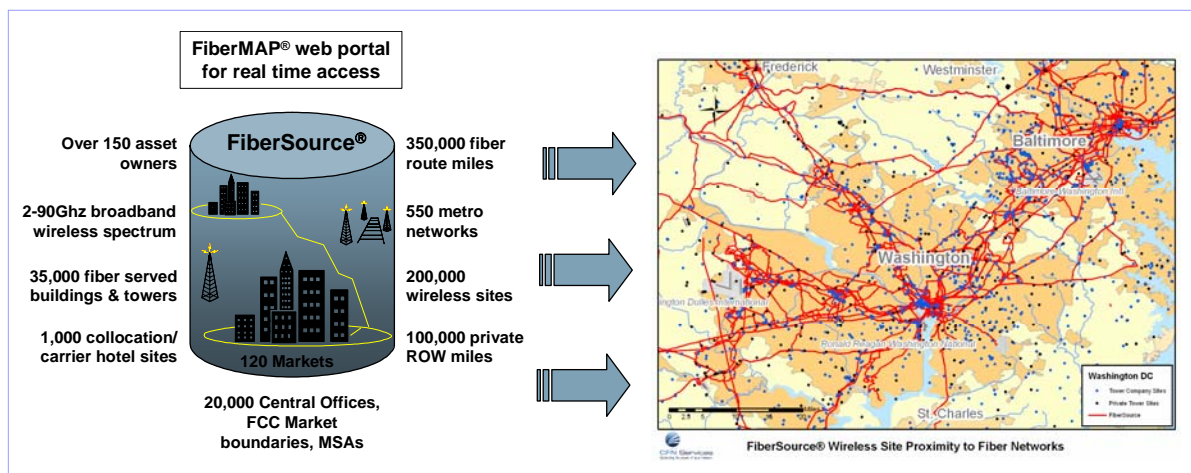

CFN Services is a telecom infrastructure services company specializing in fiber and fixed wireless transport networks, data, and services ranging from optimized carrier backhaul and transport networks to private enterprise optical networks.

We created **FiberSource®**, the industry's best and most comprehensive telecom infrastructure knowledge-base with over 550 fiber networks across 120 markets nationwide.

The platform enables rapid identification and access to dark fiber, transport services, and telecom infrastructure for MAN and WAN transport networks. With fiber proximity data on more than 200,000 wireless sites, including 80,000 tower and rooftop collocation sites leased by the top 50 tower companies, FiberSource® also enables efficient wireless hub site planning, broadband deployment, and optimization.

FiberSource® is a powerful market planning and sales targeting platform with integrated business demographics on some 13 million US business locations, 15,000 high rise office, condo, and apartment buildings, and visibility into high density carrier switching and collocation facilities. It offers direct visibility into existing fiber served sites, fiber proximity to copper fed sites, details on the carrier(s) who serve each site, and for wireless sites, the mobile carriers who are collocated at each site and/or on each tower.

CFN Services offers a FiberSource® planning product to fit any size carrier or enterprise budget and all of our services include access to the entire nationwide base of data and capabilities of the platform.

FiberSource® Planner™ & FiberSource® Access™: Annual subscription services offering unlimited nationwide access to FiberSource® with dedicated planning support monthly and direct real-time access to FiberSource® via our FiberMAP® web portal.

FiberSource® Market Survey™, Market Plan™, & Site Review™: Services that support independent projects with options for custom and FiberSource® market-wide provider maps.

FiberSource® Advisor™: Hourly retainer based services support projects ad hoc, as needed.

CFN also offers a range of planning, deployment, and managed network services ranging from direct fiber sourcing, network integration, and LEC collocation to turnkey network delivery, financing, and management.

Contact CFN today to learn more about how we're helping carriers and enterprises save millions in transport costs, grow broadband service revenues, and converge networks for the future.
