## CFN Services Expands to Provide Low Latency Options for Toronto Exchanges

Herndon, VA June 1, 2009 (PRWeb) CFN Services, the leader in Low Latency Network Solutions, is now expanding their offerings into Toronto. CFN is offering the lowest latency connections for global markets to key Toronto exchanges: Alpha Trading, Pure Trading, Omega ATS, MATCH Now, TMX Group, and Chi-X Canada. Now traders globally can receive a trading advantage in Toronto by partnering with CFN Services.

CFN is a leading ultra low latency and custom fiber optic network integrator in the financial industry; offering specific Ultra Low Latency solutions for the trading areas in Toronto, Chicago, New York/ New Jersey Metro, Washington DC, London, and Frankfurt. CFN is recognized as the only network provider to offer a Latency Level SLA along with a Latency Improvement Plan. CFN Services sets themselves apart from other transport vendors by offering carrier neutrality, professional services, fully managed services and the ability to design and implement custom fiber networks.

“We are seeing a transformation in trading on Canadian markets as ATS’s like Alpha, Pure, Chi-X, Omega, and dark pools are challenging TMX Group’s historical dominance. This transformation is providing fertile ground for global high frequency traders; particularly those throughout North America. We are meeting the needs of these traders by providing our customers the best networking solutions to accelerate trading,” states David Conrad, Vice President of Sales. “We prioritize the routes and trading areas that are key to our customer’s success, and Toronto is now one of the areas that we will offer guaranteed low latency optimized network solutions.”

CFN Services’ FiberSource® Telecom Platform provide them the ability to view all available fiber, including that of Utilities, Carriers, Dark Fiber and Collocation Providers; in order to put together the optimal network routes or provide custom network solutions specific to a customer’s exact requirements and priorities. The key to the integrated solution provided by CFN Services is the ability to identify metro fiber, long haul and the collocation space to piece together the carrier networks onto one optimal path. This translates into a networking performance advantage for an electronic trading firm. This allows CFN Services to be Carrier and Data Center agnostic, ensuring to provide the best solution based on latency, performance and stability not on relationships.

*Trading Firms now have the ability to reduce Fiber Optic mileage, decrease latency and have confidence that your network decisions were made with the knowledge of all existing options.*

### About CFN Services

CFN Services is a managed telecom infrastructure services company providing network services for the Enterprise, Public Sector and Carrier Markets. Specializing in network planning, deployment, and managed services, including local access transport, low latency networking, and mobile backhaul optimization, CFN Services leverages the company's flagship FiberSource® network planning and optimization platform. CFN Services has provided network planning and deployment services to some of the leading wireless and wireline network operators including Verizon, AT&T, Level 3 and Sprint.
