## CFN Services Wireless Jumpstart® adds Communications Infrastructure Corporation®

CFN Services Wireless Jumpstart® adds Communications Infrastructure Corporation® to its growing list of ecosystem providers that focus on wireless infrastructure ranging from site and network planning, acquisition, implementation, backhaul, and ongoing cost and performance optimization. Wireless Jumpstart® helps mobile operators construct an integrated solution utilizing the best of breed partners to ensure they have the optimal solution for today and poised for their future growth.

CIC has expertise in microwave engineering, installation and maintenance and turnkey solutions for the implementation, and maintenance of wireless backhaul infrastructure; to Wireless Jumpstart®. Their integrated approach is supported by a multi-discipline understanding of wireless infrastructure, promoting an efficiency in a comprehensive project environment, and compliments the integration message of the Wireless Jumpstart® value to the wireless market.

Marty Snyder, President, CIC states, "We are excited to be part of the Wireless Jumpstart® program. It is good to be part of a team whose focus is on wireless infrastructure, which is the base for all the wireless applications and devices. Bringing awareness of the value of integrated solutions allows mobile operators the ability to expedite implementations providing them shorter cycles for new market implementations and existing market upgrades."

CFN Managed Core Infrastructure® coupled with CIC expertise offers takes advantage of economies of scale along with custom design to optimize the backhaul network. Getting all sites onto the core offers a wireless provider the ability to manage cost while growing capacity, and provides control over their backhaul growth. Ensuring the right choices up front keeps the carrier competitive and prevents costly rework. CFN and CIC can bring together microwave along with a combination of dark and lit fiber. Customized core solutions from CFN ensure the provider the ability to know all the options available when choosing the best solution for their short term and long term requirements.

Integrated Design, Acquisition and Backhaul in the planning phase for all network upgrade and/or development allows mobile operators the advantages of decreased cost, increased time to market and improved efficiency of the final design. Working with the ecosystem partners in CFN Wireless Jumpstart® provides a portal to help bring all the pieces together.

### About CFN

CFN Services is a managed telecom infrastructure services company providing network services for the Enterprise, Public Sector, Carrier and Wireless Markets, specializing in high performance networking, middle mile and last mile optimization and mobile backhaul. CFN Services leverages FiberSource®, a global knowledge-based platform that identifies all available dark and lit fiber, collocation, towers, structures and lit buildings; providing network design, planning, deployment, and managed services offerings. ### About CIC

CIC is a leading provider of infrastructure engineering and development services for the wireless telecommunications industry, specializing in the design and deployment of wireless backhaul solutions. We offer site development, microwave/RF engineering, installation, maintenance, and AWS relocation solutions for the efficient design and deployment of both large- and small-scale networks. Our expert team of 100+ professionals employs the latest appropriate technologies, the highest quality service, and the most up-to-date knowledge to meet the demands of wireless carriers. For more information visit [www.cicusa.com](http://www.cicusa.com).
